(a) second-order kernel at $k_a \pm k_b$, mean over 70 pairs
$\langle K \rangle - 1$ (2LPT tree ≡ 0)
D
3LPT
5LPT
7LPT
PM
PM − 7LPT, Eulerian density
PM − 7LPT (± s.e.m. over pairs)
(b) per pair (4 realizations)
$K_{\rm PM} - K_{\rm 7LPT}$
$|k_a \pm k_b|$ [h Mpc^{-1}]
D = 0.5
D = 0.7
D = 1
