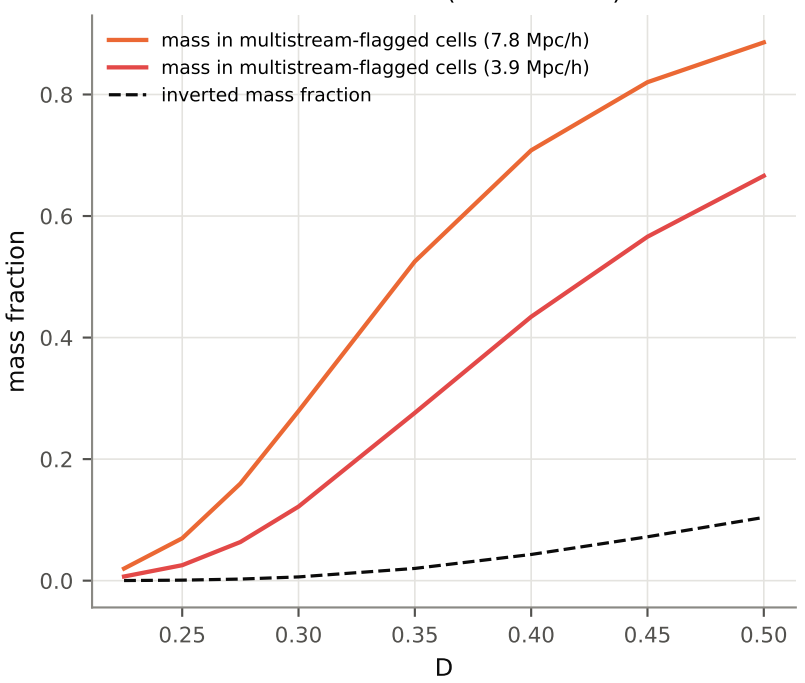
Post-crossing departure vs kinetic multistream stress
ΔC_2 [$(h^{-1}\mathrm{Mpc})^2$]
D
measured: PM − 7LPT
measured: PM − LPT$_\infty$ (Shanks)
from PM multistream stress, 7.8 Mpc/h cells
... boundary cells only
from PM multistream stress, 3.9 Mpc/h cells
... boundary cells only



Multistream cells vs inverted (shell-crossed) mass
mass fraction
D
mass in multistream-flagged cells (7.8 Mpc/h)
mass in multistream-flagged cells (3.9 Mpc/h)
inverted mass fraction
